Remote Control Operation

General

Remote control input bits are opto-isolated and connected by a logical OR function to the local switch settings. For remote control set the corresponding local switches to “Remote”, "AC" and "H” and select the desired setting via a bit-code at the corresponding digital inputs.
Mixed operation, e.g. local AC/DC setting and remote controlled gain setting, is also possible.

The switch setting “FBW / 10 Hz” of the lowpass signal filter is not remote controllable.
